

Operator's Diagnostic Kit

The Operator's Diagnostic Tool Kit has been assembled from the very best equipment available on the market. This allows Operators to undertake diagnostics of wires and cables with full confidence in their tools.

Included in the kit is the Enhanced (Wire Attack) Operators Diagnostic Kit Mod 2 which has been specifically designed to assist the Operator to rapidly diagnose wires within electronic circuits. Wires can be diagnosed extremely quickly using the range of insulation piercing probes without the requirement to spend lengthy amounts of time and danger stripping insulation with the wire in a live circuit.

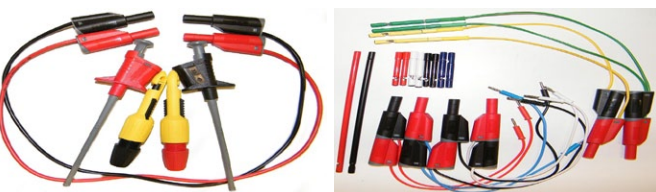

Incorporated in the kit is a top of the range Digital Multimeter and Current Clampmeter. These allow the operator to carry out a number of electronic tests in circuits with the confidence of true, accurate readings.

The kit also includes a digi-probe to identify digital signals and a bespoke ultra-sonic detector.

Key Features

- Simple tools which are easy to use even in the most stressful situations
- Enhanced Wire Attack Capability
- Top of the range Digital Multimeter and Current Clampmeter
- Ability to identify digital signals along cables and wires
- Ability to diagnose IAS
- Essential enhancement to the Operator's 1st Line Tool Kit
- Proven Techniques
